

BLOCKSI MANAGER EDUCATION EVERYWHERE:

# Admin Dashboard

Content filtering for Chromebooks and Windows-OS devices

Google for Education partner

Microsoft partner

Scalable to thousands of Chromebooks and Windows-OS devices

Cyberbullying & Self-harm detection across GSuite

Rich analytics per user

Teacher, Parent and Principal accounts management

Youtube content and channel filtering

Billions of rated websites

Chrome Extension and PAC file based

Fully GSuite for Education compliant

Pure cloud-based Filtering

A.I.-assisted web content rating

Anti-theft and device management

Cloud-based filtering for all devices

## Multi-OS capable

Blocksi Manager: Education everywhere (BMEE) gives school administrators the ability to granularly apply a Filtering policy to Chromebooks enrolled into a GSuite for Education domain or Windows-OS devices.

BMEE is a non proxy, cloud based internet and Youtube filtering and trend analysis solution. It is very granular and as such the administrator(s) can manage multiple filtering policies and apply them to different Organization Units.

## A district-wide solution

BMEE is a multi-layer cloud filtering system that allows IT admins to push geo-localized filtering policies to every device. Internet filtering is enforced to every device according to policies made of web, Youtube, content, time access management and application filter profiles.

21st century digital learning brings a new paradigm where 1:1 classroom transforms the way teachers used to teach. BMEE is also a classroom management system that allows teachers to monitor every Chrome or Windows screen in their class while at the same time collect Learning analytics and enforce content. BMEE also offers Student Safety- an AI-powered tool that allows administrators, principals, and delegates to detect harmful behaviour on any student's GSuite Gmail, Google Docs, Google Drive and Youtube account. BMEE Anti-theft is a feature that lets you track the exact location and activity of a lost or stolen Chromebook, sends a screenshot and collects information to identify the user.

Content filtering and Classroom management for Chromebooks and Windows-OS devices!

Web Filtering for Chromebooks and Windows

Filters On Campus and Off Campus

Trend Analysis and detailed Analytics

Admin, Teacher, Parent, and Delegate Dashboard

Blocksi Rating across billions of web pages

## Admins, Teachers, Parents, and Principals

Administrators as key actors in handling school's IT infrastructure now have the power to oversee every school Chromebook or Windows-OS device, whether it's laptops or tablets, and deploy time- or location-specific filtering policies at any scale.

Through the Admin dashboard, you can create lists that block or allow defined URLs or web categories- BlocksI rates billions of websites and groups them in 79 categories to choose from.

You can apply granular filters within Youtube and create policies for in and out of school or time of the day. Some of the filtering capabilities can be delegated to the parent through the Parent dashboard and to the teachers through the Teacher dashboard.

View detailed Analytics per student, class or per Organization unit for a certain time period and export a PDF report. These insights are available to the principal on the Delegate dashboard as well and can help track the students' online presence and provide feedback on what works during class and what doesn't. Admins can set up Alerts, triggered when inappropriate content is accessed.
